

VEDANT KADVE

Data Scientist | Machine Learning Engineer

Nagpur, India | +91-9325499508 | vedantkadve7@gmail.com | linkedin.com/in/vedant-kadve | github.com/vedantk2809 | vedantk2809.github.io

PROFESSIONAL SUMMARY

Motivated Data Scientist and recent B.Tech (CSE) graduate with hands-on experience building end-to-end ML pipelines. Proficient in Python, SQL, Scikit-learn, TensorFlow, and Streamlit. Skilled in supervised learning, NLP, time-series forecasting, and feature engineering. Delivered quantified business impact — fraud detection system achieving Rs 6.27M net benefit and demand forecasting model with 92% accuracy (MAPE < 10%).

CORE COMPETENCIES

Machine Learning • Deep Learning • NLP • Time Series Forecasting • Predictive Modeling • Feature Engineering • EDA • Fraud Detection • Sentiment Analysis • Demand Forecasting • Model Evaluation • Python • SQL • Scikit-learn • TensorFlow • PyTorch • XGBoost • Pandas • NumPy • Power BI • Tableau • Streamlit • REST API • Git • AWS • GCP

TECHNICAL SKILLS

Languages: Python, SQL (MySQL), Java, HTML, CSS

ML / AI: Scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, ARIMA, Facebook Prophet, NLTK, TF-IDF, LLMs (exploratory), Generative AI (exploratory)

Data & Viz: Pandas, NumPy, Matplotlib, Seaborn, Power BI (DAX, Power Query, KPI Dashboards), Tableau, Microsoft Excel

Deployment: Streamlit, REST API, Git, GitHub, Docker (basic), MLflow (exploratory), Jupyter Notebook, VS Code

Cloud: AWS — Foundational, GCP — Foundational

Concepts: Supervised Learning, Classification, Regression, Clustering, Class Imbalance Handling, Threshold Optimization, Cross-Validation, Hyperparameter Tuning, SQL Data Pipelines

PROJECTS

Fraud Detection in Online Transactions | Python, SQL, Scikit-learn, Logistic Regression, Random Forest, Gradient Boosting, Pandas, Streamlit | Jan–Apr 2026

- End-to-end ML fraud detection pipeline on 50,000 digital payment transactions (UPI, cards, net banking, wallets); ROC-AUC 0.7085, threshold 0.22 → 100% fraud recall and Rs 6.27M net benefit.
- Engineered 10 behavioral features (Composite Risk Score, device-location mismatch, transaction velocity, amount deviation); simultaneous device + location change raises fraud probability 6.2× (6.94% → 42.78%).
- Designed 4-tier decision framework (Hard Block, Soft Review, OTP Challenge, Auto-Approve) and deployed real-time Streamlit scoring app. github.com/vedantk2809/fraud-detection-system

Customer Review Sentiment Analysis — NLP | Python, NLTK, Scikit-learn, TF-IDF, Logistic Regression, Naive Bayes, Random Forest | Aug–Nov 2025

- NLP pipeline classifying 50,000+ customer reviews (Amazon, Flipkart, IMDB, Twitter) as Positive/Neutral/Negative; 91% accuracy, F1 0.89 using TF-IDF across 20,000+ unique terms.
- Tokenization, stopwords removal, lemmatization; benchmarked Logistic Regression vs. Naive Bayes vs. Random Forest; identified product categories with highest negative sentiment. github.com/vedantk2809/customer-review-sentiment-analysis

Retail Sales Forecasting — Time Series Analysis | Python, ARIMA, Facebook Prophet, XGBoost, Pandas, Matplotlib | Mar–Jun 2024

- Forecasted monthly retail demand on 5 years of data (1,800+ daily observations); 92% accuracy (MAPE < 10%), 18% error reduction over baseline; delivered 3–6 month inventory plans for multi-store chain.
- Engineered lag, rolling-average, and calendar-based features to improve model performance across seasonal and trend components. github.com/vedantk2809/retail-sales-forecasting

EDUCATION

B.Tech — Computer Science and Engineering | RTMNU, Nagpur | July 2020 – June 2024 | CGPA: 7.46/10

Relevant Coursework: Data Structures and Algorithms, DBMS, Machine Learning, Probability and Statistics, OOP, Web Technologies

CERTIFICATIONS

- Python Programming — HackerRank (2023) | Java Programming — HackerRank (2022)
- SQL and MySQL: Queries, Joins, CTEs, Window Functions, Database Design — HackerRank / Udemy (2023)
- Power BI: DAX, Power Query, KPI Dashboard Reporting — Microsoft / Udemy (2023)
